

JavaScript Fetch API Assignment - Question 1

1. Fetch and Display User Data:

- Use the Fetch API to get a list of users from a public API. For example, you can use the JSONPlaceholder API for this task.

The endpoint to fetch users is: <https://jsonplaceholder.typicode.com/users>.

- Once the data is fetched, display the user details (like name, email, and address) in a list on your webpage.
